CLPL®

en

CLPL® (Continuous Low Pressure Laminate) is a Lamitex exclusive technology that gives decors an hyper-realistic natural look. They do not contain any trace of added formaldehyde, PVC or phenols and, thanks to their extreme flexibility, are the best choice for interior vertical surfaces.

SYNCHRONIZED PORE

The technology of the synchronized pore allows to recreate with absolute realism the grains, the contrasts, the tactile sensations typical of the different natural woods. An effect almost identical to truth, which also applies to laminates that reproduce metals, stones or cements. The three-dimensional effect is surprising and amplifies the depth perception of the materials.

ECOLOGY COMMITMENT

FSC® certification

All Lamitex products do not contain polluting agents, or any added formaldehyde. They ensure additional security and control, guaranteed by FSC® certified chain.

FLAME RETARDANT

Optional

The whole laminate composition can be engineered to obtain a high level of fire inhibition, in order to comply with the most stringent regulations regarding interior design surfaces safety.
